

# Student Response Check

Welcome to the SC-NCSC Student Response Check

This section will help one evaluate the student response capabilities. The content-neutral assessment allows the observation of the student's mode of response. The response check has 3 items.

Please note:

- For the response check, it is NOT important that the student responds correctly to any of the items. Rather, the purpose is simply to determine if the student can indicate a response using his or her preferred method of communication.
- If the student shows any observable mode of communication during any administration of the SRC, the TA must administer the entire SC-NCSC assessment in both ELA and Math.
- If the student does not show any observable mode of communication, the TA should administer only the first four items of the SC-NCSC in ELA and Math and contact his or her DTC-Alt. If the SCDE determines that the student does not have an observable mode of communication, the SCDE and AIR will close the student's test.

You are going to see three items. For each item, respond as directed.
